The invention relates to a new purified tumour necrosis factor related apoptosis inducing ligand (TRAIL) polypeptide comprising an amino acid sequence that is at least 9% identical to human TRAIL (ADK15502). The TRAIL polypeptide induces apoptosis of Jurkat cells. Also included are a purified human TRAIL polypeptide encoded by the recombinant vector deposited in strain ATCC 69849 (or a fragment of human TRAIL protein of SEQ ID NO: 2 that induces apoptosis of Jurkat cells), a fusion protein comprising a leucine zipper comprising at least two soluble TRAIL polypeptides (comprising a leucine zipper comprising at least two soluble TRAIL polypeptides (or at least two comprising at least two soluble TRAIL polypeptides (or at least two soluble TRAIL polypeptides (or at least two contacting TRAIL-sensitive cancer cells with a TRAIL polypeptide or with a noligomer defined above). The TRAIL polypeptide is useful in studies of apoptosis, in regulating programmed cell seath, for treating leukaemia, cancer (e.g. colorectal cancer) or viral infections, or in purifying tenkamia cells or adesired cell surface antigen which can be used in evaccine development. The TRAIL polypeptide may also be used in cancer cancer mediated by defective or insufficient amounts
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DDSYMDPNDEESMNSPCWOVKWOLROLVRKMILRISEETISTVQEKQONISPLVRERGPQ 120

                                                                                                                                          à
                                                                                                                                                                         셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to apoptosis inducing molecule I (AIM-I) polypeptide and the encoding polynucleotide useful in biological, diagnostic. Cilifical and therapeutic arts. The invention is useful in treating autoimmune disorders such as systemic lupus erythematosus, immunoproliferative disease lymphadenopathy (IPL), andioimmunoproliferative lymphadenopathy (IPL), rhumatoid arthritis, diabetes and multiple sclerosis, graft versus sost disease, lymphoproliferative disease such as lymphadenopathy, in inhibiting neoplasis such as tumour cell growth, in treating restenosis and regulating haematopoiesis in endothelial cell development. The invention is useful in chromosome identification and as a diagnostic marker for determining expression of AIM-I polypeptide in tumour cell lines including pancreatic tumour, endometrial tumour and T-cell lines invention is also useful in gene therapy. The present sequence is human apptosis inducing molecule I (AIM-I) protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This invention relates to the novel association of protein sequences (and the genes which encode them) to the NF-kappaB pathway. The invention may be useful for the production of compounds with an antinilammatory, cytostatic, hepatotropic, virucide, antiarthritic, antirheumatic, gastrointestinal-Gen, antiasthmatic, antiarteriosclerotic, immunosubpressive or vulnerary activity or for gene therapy. The proteins and nucleotides are useful for diagnosing, preventing, treating, or ameliorating conditions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    NF-kappaB pathway; antiinflammatory; cytostatic; hepatotropic; virucide;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New isolated polynucleotides and polypeptides associated with NF-kappaB pathway, useful for diagnosing, treating, or preventing disorders or diseases associated with NF-kappaB pathway.

immune disorder, an inflammatory disorder, an inflammatory disorder related to aberrant NP-kappaB regulation, cancer, aberrant apoptosis, related to aberrant NP-kappaB regulation, cancer, aberrant apoptosis, confers, hopeful disorders, Hodgkin's Lymphomas, haematopoietic tumours, hyper-IgM syndromes, hypohidrotic ectodermal dysplasia, x-linked anhidrotic ectodermal dysplasia, immunodeficiency, viral infections, HIV-1, HTLV-1, confermal dysplasia, immunodeficiency, viral infections, HIV-1, HTLV-1, conversival, evasion of immune responses, rheumatoid arthritis, inflammatory bowel disease, colitis, asthma, atherosclerosis, cachexia, euthyroid sick bowel disease, colitis, asthma, atherosclerosis, cachexia, euthyroid sick converse, stroke, BAR, autoimmune disorderse, disorders related to hyper immune activity, disorders related to aberrant acute phase responses, hypercongenital conditions birth defects, necrotic lesions, wounds, cygan transplant rejection, conditions related to organ transplant cristion birth defects, necrotic lesions, wounds, crejection, disorders related to aberrant signal transplant conditions. The present sequence is that of a human protein which is subject to the novel association with the NF-kappaB pathway of the invention. Note: This sequence does not appear in the specification but was obtained by the indexer from Genbank.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    RVAAHITGTRGRSNTLSSPNSKNEKALGRKINSWESSRSGHSFLSNLHLRNGELVIHEKG 180

The present invention describes an antibody or its fragment comprising a VH and VL domain that is at least 80% identical to a VH and a VL domain of any of the 14 sequences given in SEQ ID NO:43 to 56, or a VH and a VL domain of an antibody expressed by any one of the cell lines contained in American Type Culture Collection (ATCC) Deposit numbers PTA-3571, PTA-3570 and PTA-3575, where the antibody specifically binds TR4 (TRAIL receptor). Also described is a pharmaceutical composition for treating or preventing haematological cancer, comprising the antibody or its fragment and member selected from ibritumomab tiuxetern, imatinib mesylate, bortezomid, and a smac peptide or polypeptide. The antibody has cytostatic activity, and can be used in immunotherapy. The antibody or its fragment can be used for the preparation of a pharmaceutical composition for treating or preventing haematological cancer, e.g. Non-Hodgkin's lymphoma, chronic myelogenous lymphoma, multiple myeloma, or chronic myelogenous lymphoma, multiple myeloma, or tumour necrosis factor (TMP) related apoptosis-inducing ligand (TRAIL), which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      DDSYWDPNDEESMNSPCWQVKWQLRQLVRKMILRTSEETISTVQEKQQNISPLVRERGPQ 120

```
tumour, metastasis or infectious leaton in a subject which comprises
administering into or near a site of a tumour or infectious lesion in a
subject an antigen presenting cell and an immunostimulatory cytokine or a
nucleic acid encoding the cytokine. The invention may be useful for the
production of compounds with a cytostatic or vulnerary activity acting as
immunomodulators. The method is useful in inhibiting or treating as
tumour, metastasis or infectious lesion in a subject, where the size of
the tumour, metastasis (where number is also decreased) or infectious
ce the tumour, metastasis (where number is also decreased) or infectious
ce is denocarcinoma, colorectal cancer, basal cell cancer, oral cancer,
cancer, renal cancer, laryngeal cancer, bladder cancer, head and neck
cancer, renal call cancer, pancreatic cancer, pulmonary cancer, cervical
cancer, ovarian cancer and breast cancer. The present sequence is that
cell a protein which is related to the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Inhibiting or treating a tumor, metastasis or infectious lesion comprises administering into or near site of a tumor or infectious lesion an antigen presenting cell and an immunostimulatory cytokine or a nucleic
colorectal cancer; basal cell cancer; oral cancer; nasopharyngeal cancer; laryngeal cancer; bladder cancer; head cancer; neck cancer; renal cell cancer; pancratic cancer; pulmonary cancer; cervical cancer; ovarian cancer; oseophageal cancer; pastric cancer; prostrate cancer; testicular cancer; breast cancer; human.

```
The invention relates to an isolated nucleic acid comprising at least 10 in the specification, or its complement. The nucleic acids encode cancerassociated proteins. Also included are an expression vector comprising the isolated nucleic acid cited above, a host cell comprising the above cereombinant nucleic acid cited above, a host cell comprising the above cereombinant nucleic acid cited above, a host cell comprising the above cereombinant nucleic acid cited above, a host cell comprising the above central contiguous nucleotides of any of the above comprising at least 10 contiguous nucleotides of any of the above central contiguous nucleotides of a CA sequence sa mentioned in the specification, or its opportunity in isolated antibody, (or its antigen binding fragment) that binds to the above polypeptide, a hybridoma that produces the above monoclonal antibody, a pharmaceutical composition comprising the above monoclonal antibody, a pharmaceutical cancer cells in an individual, a method for inhibiting growth of cancer cells in an individual, a method for inhibiting growth of cancer cells in an individual, a method for inhibiting growth of cancer cells in a ni individual, an electronic library comprising the above polymetride (or their fragments), methods of sereening for anticancer activity or for a bloactive agent capable of modulating the activity of a CA protein (CAP) methods for detecting cancer cells in a method for treating cancers and a method for inhibiting the expression of a polymetric associated with expression of a polymetric and methods are useful for detecting, cancer cells in method for treating cancers and a method for inhibiting cancers, especially lymphoma and lankaemia. These may also be used in screening cancer is

New PRO polypeptides and polynucleotides, useful for treating e.g. erythematosus, rheumatoid arthritis, diabetes mellitus, immune-mediated renal disease, or demyelinating diseases of the central or peripheral nervous system

Claim 7; SEQ ID NO 566; 2940pp; English

polypeptide encoded by it. A protein of the invention has antiliflammatory, antilaribrit, antilhematic, immunosuppressive, osteopathic, antidiabetic, dermatological, antipsoriatic, antiallergic, antidiabetic, and respiratory activity. A polynucleotide antissthmatic, hepatotropic, and respiratory activity. A polynucleotide The invention relates to a novel isolated nucleic acid and the PRO

cut the inventious may nave a use in gene therapy, the kwo polypeptide, the agonist, antagonist, or antibody that specifically binds to the polypeptide is useful for treating an immune related disorder such as systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, osteoarthritis, osteoarthritis, osteoarthritis, osteoarthritis, osteoarthritis, osteoarthritis, osteoarthritis, systemic systemic conversity, autoimmune haemolytic anaemia, autoimmune haemolytic anaemia, autoimmune haemolytic anaemia, autoimmune haemolytic anaemia, autoimmune chromania, thyroiditis, diabetes mellitus, immune-mediated renal disease, a demyelinating disease of the central or peripheral nervous system, idiopathic demyelinating polyneuropathy, Guillain-Barre syndrome, contention inflammatory demyelinating polyneuropathy, a hepatobilary disease, infectious or autoimmune chronic active hepatitis, primary cirlosis, granulomatous hepatitis, sclerosing cholangitis, inflammatory bowel disease, granulomatous hepatitis, sclerosing cholangitis, disease, an autoimmune or immune-mediated skin disease, a bullous skin disease, asthma, allergic rhinitis, atopic dermatitis, food disease, asthma, allergic rhinitis, atopic dermatitis, food disease, asthma, allergic rhinitis, atopic dermatitis, food chaemistivity uricaria, an immunologic disease of the lung, costinophilic pneumonia, idiopathic pulmonary fibrosis, hypersensitivity preminents a transplantation associated disease, graff rejection or of the invention polypeptide, its The PRO invention may have a use in gene therapy. of the invention

"VEGI, a novel cytokine of the tumor necrosis factor family, is an angliogenesis inhibitor that suppresses the growth of colon carcinomas
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           -!- SUBUNIT: Homotrimer (Potential).
-!- SUBCELLULAR LOCATION: Type II membrane protein (Probable).
-!- TISSUE SPECIPICITY: Specifically expressed in endothelial cells.
Detected in placenta, lung, kidney, skeletal muscle, pancreas, spleen, prostate, small intestine and colon.
-!- SIMILARITY: Belongs to the tumor necrosis factor family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             -!- FUNCTION: Inhibits vascular endothelial growth and angiogenesis

Activates NFKB, Stimulates the proliferation of T cells, and inhibits growth of the democarcinoma HT-29. Acts as a receptor for Herpes simplex intermed and supplementarial stress of the second of the democarcinoma HT-29. Acts as a receptor for Herpes simplex interminants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This SWISS-PROT entry is copyright.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              -i- PTM: N-glycosylated.
-i- PTM: The soluble form of isoform 1 derives from the membrane form by proteolytic processing.
-i- SIMILARITY: Belongs to the tumor necrosis factor family.
-i- CAUTION: Ref.5 sequence differs from that shown due to a frameshift in position 178.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SUBCELLULAR LOCATION: Type II membrane protein and secreted (isoform 1); Cytoplasmic (isoform 2).

In DNA 5:149-156(1986).

Coding for rabbit tumor necrosis factor.";

In DNA 5:149-156(1986).

Color State of the that binds to TNFRSFIA/TNFR1 and TNFRSFIB/TNFRE. It is mainly secreted by macrophages and can induce cell death of certain tumor cell lines. It is potent pyrogen causing fever by direct action or by stimulation of interleukin 1 secretion and is implicated in the induction of cachexia, Under certain conditions it can stimulate cell proliferation and induce cell differentiation.

Color SUBURITH Hondortimer (By similarity).

Color SUBURITH CACATION: Type II membrane protein. Also exists as an extracellular soluble form (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               similarity).
DISEASE: Cachexia accompanies a variety of diseases, including
cancer and infection, and is characterized by general ill health
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SEQUENCE FROM N.A.

The present invention provides one kind of mutant 95-281 recombinant soluble polypeptide (rsTRAILthr95gly-281) in human TRAII extracellular region. The preparation process and antineoplastic application of the recombinant soluble polypeptide are also provided. The present sequence represents human TRAI-1 extracellular region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SEETISTVQEKQQNISPLVRERGPQRVAAHITGTRGRSNTLSSPNSKNEKALGRKINSWE

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to a cell factor derivative (TRAILD) used as an anticancer derivative. The TRAIL protein can be expressed in soluble form in bacterial cytoplasm. The present sequence represents a TRAILD amino acid sequence. Recombinant TRAILD fusion proteins can be used in anti-cancer medicaments to treat cancer of the liver, breast, or kidney. It can also be used to treat leukaemia

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to the isolation of cDNA encoding human tummour related apoptosis inducing ligand (Trail), and the Trail protein. The Trail full length cDNA is cloned, and is utilised to create a Trail prokaryotic expression system. The full length Trail cDNA is used to respectively clone cDNA of soluble ectocytic segment TrailID9 and Trail 114, and respectively create TrailID9 cDNA and TrailID9 and Trail increase the expression and quantity of the Trail. TrailID9 and TrailID9 proteins, and may be useful in a new preparation for killing tummour cells. The present sequence represents the partial human Trail protein,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              131 LRNGELVIHEKGFYYIYSQTYFRFQEEIKENTKNDKQMVQXIYKYTSYPDPILLMKSARN 190
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     61 LRNGELVIHEKGFYYIYSQTYFRFQEEIKENAKNDKQWVQYIYKYTSYPDPILLMKSARN 120

This invention relates to an expression vector containing the tumour necrosis factor related apoptosis inducing ligand (TRAIL) protein receptor TSTS. The invention also comprises a method for producing the some special from an E. coli transformed with the vector. The method of the invention is useful for crystallising the TRAIL-SDRS complex. A TRAIL-SDRS crystal complex is useful for developing recombinant proteins i.e. proteins with improved stability or cytotoxic activity of a TRAIL protein which involves changing the amino acid of the AA loop to increase the various interactions between amino acid of the AA loop to increase the various interactions between amino acids of from the binding site of metal ions or the disulfide bonding, or changing the corresponding amino acids of the homotrimer interface or homodimer interface to increase the various interactions between amino acids or from the binding site of metal ion or disulfide bond, or to fill the cavity. A 3 dimensional conferring specificity for the recognition between TNP family members and for the development of TRAIL protein, which has a better stable, cytotoxic activity or an improved receptor binding affinity. The present sequence represents the human tumour necrosis factor receptor apoptosis including ligand (TRAIL) protein sequence used in the invention
                                                                                                                                                                                                                                                                                                               Novel expression vector containing an sDR5 encoding gene transformed into Escherichia coli to produce sDR5 protein for crystallizing a tumor necrosis factor-related apoptosis-inducing ligand-sDR5 complex.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         136 LVIHEKGFYYIYSQTYFRFQEEIKENTKNDKQMVQYIYKYTSYPDPILLMKSARNSCWSK 195

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  8
                                                                                                                                                                                                                                                                                                                                                                The present invention relates to the isolation of CDNA encoding human tumour related apoptosis inducing ligand (Trail), and the Trail protein. The Trail full length CDNA is cloned, and is utilised to create a Trail prokaryotic expression system. The full length Trail cDNA is used to respectively clone cDNA of soluble ectocytic segment Trail109 and Trail 14, and respectively create Trail109 cDNA and Trail1109 and Trail expression systems. The prokaryotic expression systems created greatly increase the expression and quantity of the Trail, Trail109, and Trail114 proteins, and may be useful in a new preparation for killing tumour realls. The present sequence represents the partial human Trail protein, trail114
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAB08265-83 represent tumour necrosis factor (TNF) ligands. The specification describes an AGP-3 polypeptide, which is TNF ligand family member. AGP-3 is a type II transmembrane protein, and is a potent B cell stimulatory factor. Expression of AGP-3 correlates to increases in the number of B cells and immunoglobulins produced. AGP-3 proteins, and nucleic acids may be used to treat inflammatory and immune disorders, e.g. rheumatorid arthritis, Crohn's disease, lupus and graft versus host disease. The nucleic acids may be used to regulate the expression of an AGP-3 related protein. The AGP-3 proteins, antibodies and nucleic ands are also useful for the detection of AGP-3 agonists, antagonists and characterizing interactions with AGP-3 related proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1 ERGPQRVAAHIIGIRGRSSNTLSSPNSKNEKALGRKINSWESSRSGHSFLSNLHLRNGELV 60

                                                                                                                                                                                                                        The invention relates to a TNF-related apoptosis-inducing ligand encoding (TRAIL) cDNA and its encoded polypeptide. The gene of the invention is related to mutational human tumour necrosin. The polypeptide of the invention is useful for inducing the death of tumour cells. The current sequence represents the TRAIL amino acid sequence

The present invention relates to Tumour necrosis factor (TNF) and Apolrelated Leucocyte expressed Ligand 1 (TALL-1) nucleic acid molecules, proteins including homologues), and their antibodes. The invention in particular relates to methods for regulating the interaction between TALL-1 and TALL-1 receptors (BCMA referred as B cell maturation factor) to regulate monocyte, macrophage and B lymphocyte mediated immune responses. TALL-1 protein is useful for identifying compunds that regulate B lymphocyte proliferation. It is also useful for treating B lymphocyte associated autoimmune disorders like rheumatoid arthritis, systemic lupus erythematosus (SLB), insulin dependent diabetes mellitus, multiple sclerosis, myasthenia gravis, Grave's disease, autoimmune haemolytic anaemia, autoimmune thrombocytopenia purpura, Goodpasture's syndrome,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 pemphigus vulgaris, acute rheumatic fever, post-streptococcal glomerulonephritis, or polyarteritis nodosa. The TALL-1 protein and its corresponding nucleic acid sequence are also useful in diagnostic assays. The present sequence is a C-terminal region of human TRAIL protein. which has 20-25% sequence identity with the C-terminal region of human TALL-1 protein extracellular domain. TRAIL protein is a TNP family member
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             202
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              œ

ADC03335
                                                          The invention relates to a composition (I) comprising a protein complex in crystalline form, where the complex comprises an amino acid sequence of a Receptor Activator of Necrosis Factor KB (RANK) Ligand (RANKL) ectodomain. (I) is useful for identifying a compound with RANK modulating activity, and for identifying a RANK or OPG modulating compound. (I) is useful to intelligently design mutants that have altered biological properties and for identifying mutants that have altered biological properties and for identifying new therapeutic agents. (I) is also useful to computationally screen small molecule databases for chemical entities or compounds that can bind in whole, or in part, to RANK or RANKL. The present sequence respresents a tumour necrosis factor (TNF) family member, TRAIL (164v), used in a structural-based alignment study
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  142

The invention relates to a composition comprising a protein complex in crystalline form, where the complex comprises an amino acid sequence of a receptor activator of nuclear factor kappaB (NPKappaB) (RANK) ligand (RANKL) ectodomain. The three-dimensional structural representation of a RANKL ectodomain crystal complex, is useful for identifying a RANK or osteoprotegarin (OPG) modulating compound, and for identifying a Compound with RANK modulating activity. The crystals permit the determination of the three-dimensional X-ray diffraction structure of the crystal-line polypeptide to high resolution. The atomic structure coordinates and structural information which comprises atomic structure coordinates and structures for solving the three-dimensional X-ray diffraction the coordinates for solving the three-dimensional X-ray diffraction of and/or solution. The structural information may also be used in a variety of molecular modeling and computer-based screening applications to, for example design mutants of the crystallized RANKL, its receptors, or a portion or fragment of RANKL or its receptors. The coordinates of such structural coordinates of the RANKL crystal, crystal, or subsets of such structural coordinates of the RANKL crystal, crystal, or subsets of such structural coordinates of the RANKL crystal, crystal, or subsets of dentifying candidate compounds capbable of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Composition comprising crystalline receptor activator of NFkappaB (RANK) ligand ectodomain complex whose three-dimensional structural representation is useful for identifying RANK or osteoprotegrin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         modulating RANK biological activity, and for identifying compounds which mimic the capability of RANKL to bind RANK molecules, thereby activating the receptor. The present sequence represents the amino acid sequence of the tumour necrosis factor family cytokine, TRAIL.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention discloses isolated, naturally occurring, polypeptide splice variants of human tumour necrosis factor (TNF)-related apoptosis inducing ligand (TRALL). Apoptosis, or programmed cell death, occurs during normal cellular differentiation and development of multicellular organisms. Apoptosis is induced by certain cytokines which include TNF and TRALL distormed for as Apo-2 ligand, Apo-2L). TRALL is a type II membrane protein which induces apoptosis and nuclear factor-B (NF-B) activation in many tissues and cells. Receptors for TRALL include two death domain

                                              202
           New splice variants of tumor necrosis factor-related apoptosis inducing ligand (TRAIL) isolated from B-lymphocytes and liver, useful to treat diseases or disorders associated with low expression of the variants.
                                                                                                                                                                                                                                                          Human; cytostatic; neuroprotective; immunosuppressive; splice variant; tumour necrosis factor; TNF; TNF-related apoptosis inducing ligand; TRAIL; apoptosis; programmed cell death; differentiation; development; cytokine; Apo-2 ligand; Apo-21; nuclear factor-B; NF-B; type I interferon; tumour; antitumour; gene therapy; cytotoxic; cancer; therapeutic; neurodegenerative disease; autoimmune disease; aging;

containing receptors, DR4 and DR5, as well as two decoy receptors, DCR1 and DCR2, lacking the intracellular signalling death domain. TRAIL, induced by type I interferons, induces apoptosis in tumour cells, whereas normal cells are relatively resistant without showing significant toxic side effects. Thus, TRAIL has the potential to be a very useful antitumour agent. The naturally occurring splice variants may differ in their cellular distribution, expression levels/timing and activity. Determining these factors could provide possible mechanisms for the induction of apoptosis of tumours cells. The splice variant polypeptides and polymucleotides can be used in gene therapy, to raise antibodies, to detect the levels, distribution and ratios of expression of TRAIL, and its splice variant TRAIL products and modulate its activity (agonists which bind the variant TRAIL products and modulate its activity (agonists and antagonists). Pharmaceutical compositions, comprising an expression vector or any of the amino acid sequences, are useful for causing a cytotoxic effect in cancer cells and for treatment of diseases which can be ameliorated, cured or prevented by lowering or raising the level of the amino acid sequences, are useful for causing the the amino acid sequences, are useful for causing a cytotoxic effect in cancer cells and for treatment of diseases which variant thity in blocking or decreasing the activity of the TRAIL variant cultility in blocking or decreasing include cancer, neurodegenerative accounts.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                TISTVOEKOONISPLVRERGEORVAAHITGTRGRSNTLSSPNSKNEKALGRKINSWESSR 158

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        diseases, autoimmune diseases, diseases involved in the non-normal development of tissues and aging. TRAIL's gene is located on chromosome 1326. The sequence presented is the human TNP-related apoptosis inducing ligand (TRAIL) splice variant 8, rpl-6-6, protein which has had an C-terminal section of the conserved TNP domain deleted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      39 TNELKOMODKYSKSGIACFLKEDDSYWDPNDEESMNSPCWOVKWOLROLVRKMILRTSEE 98
